ABSTRACT: In modern and current information-oriented world, knowledge management plays main function and important role in organizations and society, because employing this concept leads to make capability in organizations till more impart from their intellectual precedence. In fact, knowledge management can know a system is implicating special proficiency and this proficiency don't find in almost organization. On half of, today with consideration in there is a competition between different organizations and societies and so movement toward technological and technical world, persons are win that can her or his proficiency and knowledge apply as creativity and creature in all arenas and its precept that knowledge management can play role toward it. In this paper also, after express a series of generalizations and illustration, we introduce definitions of knowledge management, importance of knowledge management, entrepreneur, kinds of entrepreneur and relationship with knowledge management, some knowledge management tools and we present cases for suggestion for different organizations in order to achieve main thing.

Keywords: knowledge management, entrepreneur, organization.

INTRODUCTION

Today knowledge and information changed to determinant factor in success and competition power in organizations and knowledge management introduced as a finally organization subjects in knowledge management. Our environs world is fast developing and inconceivable and in this vanguard world, nations and societies are that should monitor understanding speed and his or her interaction with environs world and they accommodate her or his science and knowledge with up-to-date knowledge. If society can move in step with today world, certainly it will take merits from development and if it cannot increase self-speed, as a matter of fact it will aside other societies and it will stay at seclusion. Management connoisseurs and theoreticians are agree with subject that, acquisition competition merit is single criteria that superiority in organizations show than others that with consideration to current full change and complex in organization can guarantee their insolubility, that it gives better products and service than other competitors and by this way, it increase competition merit and they show superiority own than other organizations (Pakseresht,2003).

Today, the most part of big organizations understand that for cause their human force experiences and skills will be success and not for mechanical and physical systems and if can't enhance the proficiency and science level in labors, in fact they will earmark from global market. Knowledge management has more merits for organizations that among them can point to improving work quality, accessibility updated information, increasing proficiency, improving impressionable, improving decision making, increasing capability for responding into customers needs, increasing capability for responding to fundamental needs and developmental country and possibility change and fast adaptive (Adli,2005). In this paper is tried to meantime definition Knowledge management and entrepreneur, the role of those studies in improving proficiency and impressionable in organization.

Problem statement and the importance of it

Today knowledge is success an inseparable part in organizations. If carefully evaluate change process and knowledge evolutions in contemporary society, this main result obtained that today ultra-industrial society, it is a informational society that invigorative technologies(invigorate-thou technologies)replacement with knowledge-thou technologies, gradually(Ahmad Pourdariani,2002). Thus, Knowledge management is main subject from itself (knowledge) that we follow or track in organizations till making clear and explaining how convert information and personal and organizational studied to personal and group Knowledge and skills(Tavallaee, 2009). Hence, organizations should make environment for unity, transformation and contrast knowledge among
